ICC2 CONTROLLER

Flexible control system with convenient flow, hybrid wiring, and cloud-connectivity options

KEY BENEFITS

Multiple Wiring Options

Configure systems using conventional wiring, EZ Decoder two-wire, or Wireless Valve Link for up to 54 stations. Hybrid wiring options enable a flexible and cost-effective control system.

Secure and Reliable Connection to the Centralus™ Platform

Upgrade to cloud-based control with Wi-Fi, Ethernet, or 4G LTE cellular connectivity using the Centralus Irrigation Management Platform.

Station-Level Flow Monitoring

Enable standalone flow monitoring by zone for station-level flow learning and automatic high- and low-flow shutdown.

Smart Water Savings with ET-Based Solar Sync® Sensor

Maximize watering efficiency with daily automatic adjustments based on local solar radiation, rainfall, and temperature conditions.

WaterSense · Meets EPA Criteria
Certified by ICC-ES

IN THE FIELD

1 **Challenge:** Your customer wants to expand the landscape to the opposite side of the property.

Solution: The Wireless Valve Link System eliminates some of the biggest costs in irrigation installations: copper wire and excavation. Using this advanced wireless valve technology, it's now possible to cross sidewalks, driveways, and parking lots wirelessly, simplifying installation so you can save time, money, and labor.

2 **Challenge:** A property manager wants to add remote irrigation management and flow monitoring capabilities.

Solution: With three convenient options for internet connectivity, users can choose to leverage existing Wi-Fi or LAN (Ethernet) networks, or add a dedicated, secure 4G LTE cellular connection to cloud-based Centralus Software. At the same time, the ICC2's dedicated flow input enables standalone flow monitoring by zone for smart water savings.

IN THE DESIGN OFFICE

- The ICC2 Controller is a simple and affordable option for high-end residential and midsize commercial projects in both standalone and cloud-connected configurations.

- Flexible plug-in modules allow for convenient upgrade options, including system expansion, internet connectivity, and water management capabilities.

- Simplify commercial control systems with remote irrigation management via Centralus Software.
